

It is now possible to use a cupboard door as a desktop, while making use of the space inside the cupboard; just pull down and it is ready to use. The measurements of the desktop are the same as those of the cupboard door. **DESK** is a system characterised by a complex series of rotations combined with an extremely simple system of mounting and adaptation to fit your furniture element. Desk can be used in a number of ways: incorporated in a bathroom cupboard, in the children's room as a desk for study or play, in the home office or in the kitchen as an additional worktop. The prerogative of the system is that all the components (i.e. our mechanisms and your wooden elements) are integrated with the system itself, without the need to store extensions, etc. elsewhere.
